

BIZFON™

BizTouch3 Feature Phone

Make the *move* to a better phone system.

BizTouch3 Call Appearance Phone

For Single Office, High Call Volume Businesses

The BizTouch3 gives you the kind of sophisticated voice communications features normally associated with big business digital handsets — without the cost or complexity. The BizTouch3 lets any small office deal efficiently with a large volume of calls, improving employee productivity and responsiveness to customers. This phone is perfect for help desks, sales offices, and other service-oriented environments where people need to juggle multiple calls, see the status of other employees' extensions before transferring calls, confer with colleagues, and much more.

Features

- One-touch toggling of up to four calls at each extension
- One-button access to voice mail
- Built-in full duplex speakerphone
- Enables employees to see the status of other employees' extensions (e.g., busy, idle, Do Not Disturb, etc.)
- Pick up calls from anywhere in the office
- Transfer calls to other phones (in or out of the office), or if the line is busy, directly into voice mail
- Custom program each button for speed dial numbers or to show additional extensions
- Forward calls to any phone (in or out of the office)
- Conference up to five (internal or external) callers together
- Confer with other employees in the office using on hook call announcing

BizTouch3 Line Appearance Phone

For Multi-Tenant or Retail Businesses

If you're a retail store or a small office with multiple tenants, the BizTouch3 gives you all the benefits of a traditional Key System without the associated cost or complexity. You can dedicate lines to different tenants; one line is for Dr. Smith's calls and another line is for Dr. Miller's calls. Rather than assigning extensions to individual employees, you can do one-button call pickup by any employee from any BizTouch3 phone; "Lou, pick up line 3 for a service question." The BizTouch3 gives you enormous flexibility to control phone lines based on your business' unique needs — without complicated and costly programming.

Features

- Answer phone lines differently for different tenants
- Enables calls to be picked up by any BizTouch3 extension
- One-button access to voice mail
- Built-in full duplex speakerphone
- Enables employees to see the status of other employees' extensions (e.g., busy, idle, Do Not Disturb, etc.)
- Pick up calls from anywhere in the office
- Transfer calls to other phones (in or out of the office), or if the line is busy, directly into voice mail
- Custom program each button for speed dial numbers or to show additional extensions
- Forward calls to any phone (in or out of the office)
- Conference up to five (internal or external) callers together
- Confer with other employees in the office using on hook call announcing
